GENERAL INFORMATION:

APPLICANT: Miyazono, Kohei, Dijke, Peter Ten;

APPLICANT: Franzen, Petra; Yamashita, Hidetoshi; Heldin, Carl-Henrik

APPLICANT: Franzen, Petra; Yamashita, Hidetoshi; Heldin, Carl-Henrik

TITLE OF INVENTION: Activin Receptor-Like Kinase, Proteins

TITLE OF INVENTION: Having Serine Threonine Kinase Domains And Their Use

NUMBER OF SEQUENCES: 29

CORRESPONDENCE ADDRESS:

ADDRESSEE: Felfe & Lynch

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1, Ap

Publication No. US20030096296A1
GENERAL INFORMATION:
APPLICANT: Rosenbaum, Jan S
TITLE OF INVENTION: The Use of a BMP Protein Receptor
Complex for Screening Bone Metabolism Actives and Cell,
Co-Transfected With a Type II BMP Receptor and a Type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CATTICICATGITCAAGGGCAGAATCIAGATAGTAIGCICCATGGTACTGGTAIGAAATC 170
